ROBINS® "GIBSON GIRL"® PUNCHED TAPE EDITING AND SPLICING KITS

U.S. PATENT NO. 2,778,420, PAT. PEND.

- **FOR OILED, OIL FREE, AND MYLAR TAPES**
- **SPLICES WITHOUT LOSING A SINGLE CODE**
- **RAPID ACCURATE EDITING AND SPLICING**
- **PRODUCES "GIBSON GIRL" SHAPE SPLICES FOR SMOOTH MACHINE FEED**
- **CLEAN AND SIMPLE FOR OPERATION BY OFFICE PERSONNEL — NO HEAT OR MESSY GLUE**

- Robins Perforated Tape Splicers and Splicing System incorporates many of the features of Robins "Gibson Girl" industrial magnetic tape splicers, which have become, due to their quality and dependability the "standard of the magnetic tape industry.
- Cuts precision Vertical Cut on both ends of tape for perfect butted edges or makes splices without loss of data. Trims "Gibson Girl"® waists on both sides of the splice which prevents adhesive from contacting parts of equipment.
- The pre-punched pressure sensitive Polyester Splicing Patches supplied are cut to length and ready to apply. They produce splices of higher tensile strength than paper tape. Adhesive is carefully engineered to control tackiness, thickness, and cold flow.
- This splicing system can be adapted to the individual user's needs for either minimum time per splice or maximum strength of splices.
- Robins "Gibson Girl" Punched Tape Splicers are ruggedly constructed for industrial or office use. Mounted on a heavy cast base with precision "Vertical Cut" and "Gibson Girl" Trim Blades. Each unit has precise blade centering adjustment, and replaceable blades for easy maintenance.

NOTE:
STRAIGHT TRIM PUNCHED TAPE SPLICERS ARE AVAILABLE FOR TAPE READERS THAT USE AN EDGE TAPE FEED METHOD (N.C.R., DIGITRONICS, OMNITRONICS, ETC.) COST IS THE SAME AS THE STANDARD PUNCHED TAPE SPLICERS, HOWEVER, A STRAIGHT TRIM MUST BE SPECIFICALLY REQUESTED WHEN ORDERING.

"GIBSON GIRL"® PUNCHED TAPE SPLICING KITS contain:

One Punched Tape Splicer.
One Burnishing Roller.
50 All Perforated Polyester Splicing Patches.
Complete Instruction Manual including reorder information.

CARRYING AND STORAGE CASE FOR ROBINS GIBSON GIRL® TAPE EDITING KITS

Order this practical carrying and storage case for Tape Editing Kits. Case has provisions for securing splicer, burnishing roller, and splicing patches. Keeps all accessories in order, protects equipment from dust and damage. Splicer can be operated in case. Dimensions of case: 7 5/8" x 11 5/8" x 2 7/8".

Order Case #TSC-2

OUR SPECIAL DEVICES DEPARTMENT IS EQUIPPED TO MODIFY THESE UNITS TO MEET ANY SPECIAL REQUIREMENTS OR BUILD ANY ACCESSORIES YOU MAY REQUIRE.

ROBINS DATA CODER

ROBINS DATA CODER is a high precision 8 channel (plus feed hole) field encoder for 5, 6, 7, and 8 channel punched tapes as well as edge punched cards. All operating parts are completely encased within a durable metal housing. This compact hand encoder has a code wheel with standard numeric codes plus extra bits permitting coding of ANY alpha-numeric or other code. Two blank spaces are left on the standard code wheel which may be custom encoded. To meet special needs, custom code wheels containing any 18 predetermined codes can be supplied (code wheels are easily interchangeable). A selector knob located at the front of the unit allows for prompt and easy selection of the code desired while an indicator window at the top front shows exactly which code is being punched. After each operation, the card or tape is automatically fed to the next punching position. Chad chamber for clean operation can be easily emptied.

ROBINS DATA CODER is also ideal for erasing (all punch) or editing existing tapes or cards. By using Robins special, feed hole perforated Data Saver Patch (DSP-3), you are now able to repunch any new or corrected data without punching completely new tapes or cards.

Accessories for ROBINS DATA CODER include: A padded carrying and storage case for the safer and easier transportation and storage of each unit; A clip-on chain so the Punch may be carried attached to the belt for prompt usage at any spot at any time, and prevents accidental dropping of the unit; and a heavy cast iron stand for holding the unit when the encoder is to be used on a desk or table. This allows the operator the maximum of freedom in using his or her hands.

ROBINS DATA CODER

Weight.....2 lbs.
Shipping Weight.....4 lbs.
Dimensions.....7¾" x 3⅞"

ROBINS PART NO.	DESCRIPTION
#DC-1	Tape and Card Punch
#SCC-1	Individual Custom Codes on Standard Code Wheel

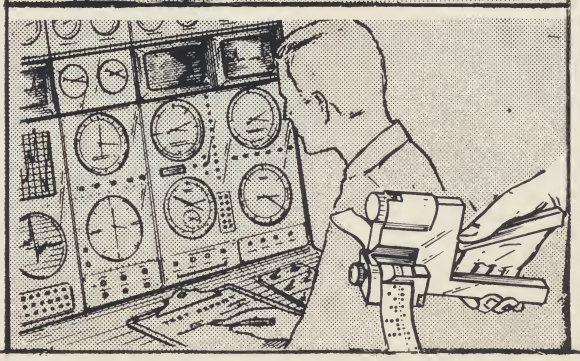
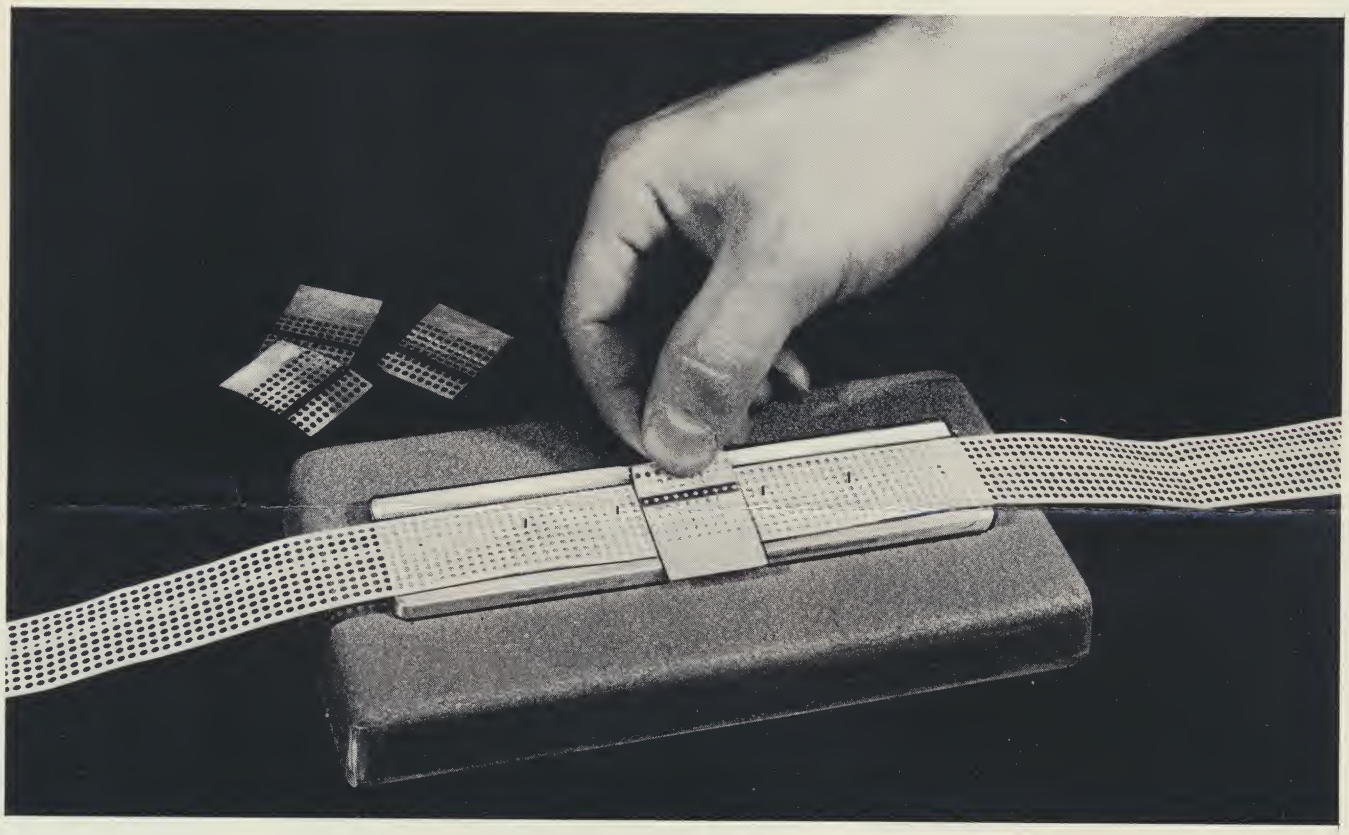
computer programming

graphic arts

reservation clerks



scientists and engineers in the field and lab



ROBINS® GIBSON GIRL JR. PUNCHED TAPE SPLICER

MAKE BUTT SPLICES IN SECONDS CORRECT, EDIT, LOOP OR REPAIR ANY 5, 6, 7, AND 8 CHANNEL PUNCHED TAPES.

For installations where economy and portability are prime considerations, ROBINS GIBSON GIRL JR. (TSPK-JR) is a quick, efficient, economical method of "Butt Splicing" 5, 6, 7, and 8 channel paper, oiled paper, and mylar punched tapes used with computers, communications equipment, automated machinery, programming equipment, data processing and collection systems, etc.

Six precision feed hole pins are set within a satin chrome splicing block for exact alignment of tape and splicing patch. The GIBSON GIRL JR. is mounted on a heavy cast base with rubber bumpers for safe and easy operation on tables or desks. By removing the two thumb screws holding the splicing block to the base, this unit can be easily carried to any location desired.

A precision cutting groove accurately guides a hand held razor type blade permitting this unit to be used for editing, correcting, attaching ends of rolls, looping, and repairing of tapes.

The GIBSON GIRL JR.'s clean and simple operation (no heat or messy glues) permits this unit to be used by anyone, anytime, anywhere with the assurance of a clean well bonded splice.

These units may be used in conjunction with any Robins splicing patches.

MAGNETIC TAPE SPLICER

ROBINS® GIBSON GIRL® INDUSTRIAL MAGNETIC TAPE SPLICING KITS

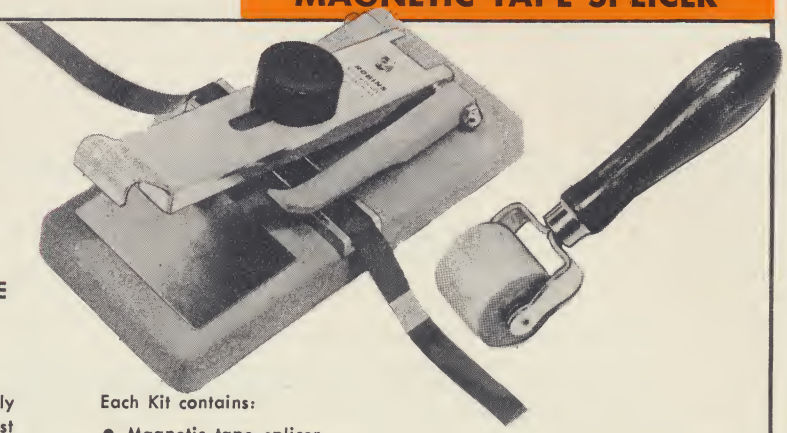
FOR RAPID EDITING AND REPAIRING OF COMPUTER, INDUSTRIAL, AND SPECIAL PURPOSE MAGNETIC TAPES UP TO 1″ WIDE.

U.S. PATENT NO. 2,778,420

A complete efficient editing and repairing kit containing ruggedly constructed splicer for industrial use. Mounted on a heavy cast base with all the precision features that have become the accepted standard of professional and industrial users.

Robins® "Gibson Girl"® Magnetic Tape Splicers feature tape guide and arms to secure tape during operation. A precision Cut is made at both ends of the tape for perfect butted edges. The "Gibson Girl" Trim produces slight concave indentations or waists on both sides of the splice. This prevents adhesive from contacting critical parts of the recorder or reading equipment. Adhesive deposited on critical parts of recorder is a frequent cause of eratic operation.

The "Gibson Girl"® Industrial Magnetic Tape Splicers work on the principle of the steel rule die. Each splicer has a cutter cartridge housing three long life blades which are replaceable. The operating lever has two knob controlled operating positions for Cut and Trim. Each unit has precise blade centering adjustment, A special burnishing plate on the base of the splicer and burnishing roller are provided.



Each Kit contains:

- Magnetic tape splicer
- Burnishing roller
- Supply of 3 rolls of special formula Mylar Splicing Tape
- Complete instructions and reorder information

Width of Magnetic Tape	KIT NO.	ROBINS SPLICING TAPE TO BE USED
¼″	#TSMK-250	#ST-500
½″	#TSMK-500	#ST-500
⅝″	#TSMK-625	#ST-500
¾″	#TSMK-750	#ST-750
⅞″	#TSMK-875	#ST-750
1″	#TSMK-1000	#ST-750

Splicers of the above standard kits feature precise Diagonal Cut Blade. Splicers requiring Vertical (90°) cut are available on special order.

Order Case #TSC-2 for Tape Editing Kits.

ROBINS DATA SAVER

ROBINS® DATA SAVER EDGE-PUNCHED CARD CORRECTION AND REINFORCEMENT SYSTEM PAT. PEND.

Using ROBINS® "DATA-SAVER", cards do not have to be discarded if coded information must be changed. Simply cover up areas to be corrected with a precision patch and repunch new information, (e.g. new prices and changes in addresses, etc.), into existing cards. Costly time and errors of repunching completely new cards and transferring written data on cards are eliminated.

New cards can be reinforced at sprocket contact area to extend their life and save valuable coded data. "DATA-SAVER" can also be used for correcting tapes.*

The Repair Table features an easy-to-use precision patch cutter, accurately calibrated scales and pins eliminating time consuming "guesswork". It provides exact measurements and location of area to be corrected and length of patches required.

ROBINS® "DATA-SAVER" SYSTEM is a complete efficient repair kit containing:

- Patch moistener
- Anodized Aluminum repair table
- Precision patch cutter
- Supply of 25 — 9″ long patching strips
- Burnishing roller
- 1 oz. eye-dropper bottle of ROBINS Data-Saver Fluid
- Complete instructions
- Carrying and storage case. (Removable cover permits Data Saver to be used in case).
- **Order Complete Kit #DSK-1**

Dimensions: Repair table — 10″ x 11½″

Case — 10⅞″ x 12⅞″ x 2¾″ Weight in case — 8 lb

DATA-SAVER PATCHES — Special gummed paper — feed hole perforated, 9″ long . . . #DSP-3 available in packages of 100, 500, and 1000.

#DSP-WA . . . Data-Saver Fluid, 1 oz. bottle.

*Special patches available for correcting paper and Mylar tapes made to order.

SEND US YOUR PROBLEMS!

If a general price change will make your bank of 5,000 to 100,000 Cards obsolete. DON'T THROW THEM AWAY. LET US ENGINEER A COST SAVING SYSTEM FOR REVISING THEM.

ADVANCED FEED HOLE PATCHES

ADVANCED FEED HOLE SPLICING PATCHES FOR PUNCHED TAPES

FOR THE GRAPHIC ARTS, TELETYPE, AND AUTOMATED MACHINERY FIELDS, ETC.

Your only source of Punched Tape Splicing Patches for Advanced Feed Hole Punched Tapes for the Graphic Arts, Teletype, and Automated Machinery Fields.

- Cut to 1" lengths for ease of application
- Patches available in widths of 11/16", 7/8", and 1"
- Preperforated for use on 5, 6, 7, and 8 channel paper, oiled paper and mylar punched tapes
- Feed holes advanced to close tolerance required
- Pressure sensitive adhesive. Peel the backing paper away and the patch is ready to apply
- Clean and simple to apply (no heat or messy glues)
- Carefully engineered adhesive to control tackiness, thickness, and cold flow

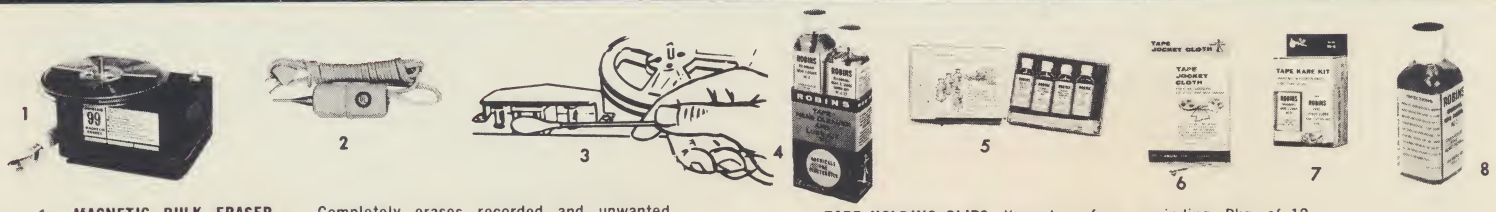
MAGNETIC TAPE ACCESSORIES



1 **MAGNETIC BULK ERASER** — Completely erases recorded and unwanted signals in seconds. Reduces background noise levels from 3 to 6 db below normal erase heal level. For reels up to 10½" dia. x ½" wide. 110 v., 60 cycle A.C.; U.L. Listed
#ME-99

2. **HEAD DEMAGNETIZER** — U.L. Listed. Removes signal damaging residual magnetism from tape head — for optimum signal to noise ratio. Easy to use. 110 volts, 60 cycle A.C.
#HD-6

3. **CLEAN-TIPS.** For cleaning tape heads and 1001 other uses. Finest surgical cotton (non-sterile) wound on 6" long sticks.
#Q-100 ..... Package of 100

4. **TAPE KARE HEAD CLEANER AND LUBE KIT.** Contains 2 oz. bottles of head cleaner and head and guide lubricant. **#TK-6**

REEL LABELS. Self stick adhesive. Write on or type titles, etc.
#SL-30 ..... (Package of 30 labels)

5. **TAPE KARE CHEMICAL KIT** — Contains 2 oz. bottles of head cleaner, head and guide lubricant, Non-Slip for tape and phono drives, and tape and phono drive oil. With 50 clean tips. **#TK-7**

TAPE HOLDING CLIPS. Keep tape from unwinding. Pkg. of 12.
#TC-12

6. **TAPE "JOCKEY CLOTH"** cleans and lubricates tape with Silicone. Washable and reuseable.
#JCT-2

7. **TAPE KARE KIT** contains head cleaner and tape jockey cloth.
#TK-2

8 **HEAD CLEANER** removes grime and accumulated oxides from heads.
#HC-2 ..... 2 oz. bottle

RECORDING HEAD AND GUIDE LUBRICANT. Silicon base liquid provides friction-free tape path, reducing head and tape wear.
#RC-2-22 ..... 2 oz. bottle

TAPE AND PHONO DRIVE OIL. For rotating and moving parts. Inhibits rust and oxidation.
#RC-2-23 ..... 2 oz. bottle

NON-SLIP FOR TAPE AND PHONO DRIVES. Helps stop slippage of idler wheels, pulley belts, and cords. Fast drying and penetrating, dries to tack-free yet non-slip surface.
#RC-2-56 2 oz. bottle
